Key takeaways

Performance

Fixed income delivered strong, broad-based performance in 2025. The Bloomberg U.S. Treasury Index and Bloomberg U.S. Corporate High Yield Index returned 6.32% and 8.62%, respectively, highlighting the strength across sectors and credit quality. Robust starting yields delivered steady income, while falling front-end rates boosted price returns. Municipal bonds staged an impressive comeback in the final four months of the year.

The big picture

Fixed income faces a favorable environment this year, with a modest U.S. economic uptick, steady global growth, and easing inflation pressures. Yields remain compelling, and intermediate duration exposure offers superior return potential compared with cash. With bond markets remaining stable, income will be the primary driver of bond returns in 2026.

Our approach

The Federal Reserve will likely approach additional rate cuts cautiously if the economy grows as expected. We are currently neutral on U.S. duration and are positioned for further yield curve steepening across several markets. In credit, discipline and precision will be needed—fundamentals are sound, yet spreads have little room to tighten with higher expected supply. Municipal bonds offer compelling opportunities further out the curve and down in quality, where selection across credits and call option structures can add value.

Carry is crowned

Taxable bonds delivered markedly strong performance across sectors and rating categories in 2025. Price gains came from falling Treasury yields and curve steepening as front-end rates priced in the Fed cuts that materialized late in the year. Credit spreads recovered from April's tariff-driven sell-off and held in a narrow range through year-end.

Coupon payments drove returns, which highlights the significance of normalized yield levels across the curve relative to recent history. Carry—the return from income, roll down, and other factors—became king in 2025, and we expect its reign to continue in 2026.

Fixed income sector returns and yields

Notes: The municipal tax-equivalent yield is calculated using a 40.8% tax bracket, which includes a 37.0% top federal marginal income tax rate and the 3.8% net investment income tax to fund Medicare. Yield to worst represents the lowest yield possible for a security given the current price, considering both call dates and maturity.

Indexes used in chart: The following indexes are represented in the sector returns and yields chart: J.P. Morgan EMBI Global Diversified Index, Bloomberg U.S. Corporate High Yield Index, Bloomberg U.S. Mortgage Backed Securities Index, Bloomberg U.S. Corporate Index, Bloomberg CMBS: Erisa Eligible Index, Bloomberg U.S. Aggregate Index, Bloomberg U.S. Treasury Inflation-Linked Bond Index (Series-L), Bloomberg U.S. Treasury Index, Bloomberg U.S. Asset-Backed Securities Index, Bloomberg Global Aggregate Index, and Bloomberg U.S. Municipal Index.

Sources: Bloomberg indexes and JPMorgan, as of December 31, 2025.

Past performance is no guarantee of future returns. The performance of an index is not an exact representation of any particular investment, as you cannot invest directly in an index.

Cash is no longer king

The broader bond market last year delivered returns that were more than double those of cash instruments. The combination of attractive yields and heightened economic uncertainty translated into strong demand for fixed income. Inflows to bond mutual funds and ETFs remained robust and steady, totaling more than \$600 billion for the year. (Morningstar data as of December 31, 2025.)

The composition of cash-flow activity between bond funds and money market funds has continued to shift. In 2023, for example, money market funds took in more than 80% of all fixed income flows. Last year the mix was 50/50.

With money market yields falling alongside Fed rate cuts, investors can now find better yields by extending further out the yield curve. Historically, bonds have outperformed cash over the long term, a trend we anticipate will continue. Should the Fed cut rates further in 2026, bond yields relative to cash would become even more appealing, likely boosting investor demand and supporting bond performance.

Cash dethroned: Bond yields versus T-bills

Source: Bloomberg, as of December 31, 2025.

Indexes used in chart: The following indexes are represented: Bloomberg U.S. Corporate Index, Bloomberg U.S. Mortgage Backed Securities Index, Bloomberg U.S. Aggregate Bond Index, Bloomberg U.S. Corporate 1-5 Years Index, Bloomberg U.S. Treasury Bill 1-3 Month Index, Bloomberg U.S. Treasury 1-5 Years Index.

Past performance is no guarantee of future returns. The performance of an index is not an exact representation of any particular investment, as you cannot invest directly in an index.

We expect high-quality core exposure to continue to deliver attractive income and provide opportunities for diversification against potential downdrafts in equities. Credit-focused strategies should be supported by a favorable economy and are valuable complements to a core allocation to increase overall yield. For investors looking beyond cash, our outlook supports a modest increase in duration and credit risk.

Paying off: Duration and credit have outperformed cash over the past 20 years

Source: Morningstar, as of December 31, 2025.

Indexes used in chart: The following indexes are represented: Bloomberg U.S. Credit Index, Bloomberg U.S. Credit 1-5 Years Index, Bloomberg U.S. Aggregate Bond Index, Bloomberg U.S. Agency Fixed Rate Mortgage-Backed Securities Index, Bloomberg U.S. Treasury 1-5 Years Index, and Bloomberg U.S. Treasury Bill 1-3 Month Index.

Past performance is no guarantee of future returns. The performance of an index is not an exact representation of any particular investment, as you cannot invest directly in an index.

A brighter backdrop

Globally, expansionary fiscal policy and less restrictive monetary policy will provide market support this year. Solid growth alongside more modest inflation should also slow the pace of central bank activity. In 2025, global central banks lowered policy rates more than 120 times combined. We expect fewer changes and more divergence in policy paths.

In the U.S., we expect real GDP growth to push above 2%, driven by continued AI investment and a fiscal boost from the One Big Beautiful Bill Act. We are monitoring two key economic areas:

- **Inflation.** Supportive fiscal and monetary policy can offset the ongoing drag from tariffs. We don't expect a significant spillover effect from tariffs on long-term inflation expectations, but we do see inflation remaining modestly elevated above the Fed's target through the balance of the year.
- **Labor.** The labor market is transitioning to a new normal, marked by reduced supply and demand for workers. We think the labor market will stabilize over the course of 2026, with the unemployment rate declining to 4.2% by year-end. This balance between supply and demand, however, remains fragile and presents downside risks.

Portfolio positioning and strategy

U.S. rates and yield curve

The U.S. Treasury curve steepened dramatically in 2025, as the yield on the 2-year note declined 75 basis points (bps) and the 30-year yield held steady. The additional yield premium between the front end and the long end reached 1.34%, the highest level in more than four years. While the term premium has risen substantially over recent years, it remains somewhat below the levels that persisted prior to the 2008 global financial crisis.

The Fed has now largely completed its risk management easing. We see limited scope for additional easing, which leaves a narrower range of potential outcomes for the Fed than in prior years. Markets expect around two additional cuts in 2026. That is a reasonable expectation, considering that the Fed has been weighing the employment side of its mandate more heavily than the inflation side.

We see a low probability for rate hikes this year, and this bias will likely remain with the next Fed chair. But we note that the December Fed meeting drew three dissenting votes, which creates additional uncertainty surrounding the upcoming changes to the Fed's leadership.

Our outlook calls for 10-year yields to hold within a range around current levels. We are neutral on U.S. duration but see a tactical opportunity for some additional steepening in the curve. The term premium may increase for several reasons, including increased global issuance, uncertainty around the next Fed chair, and the scale of future tariff revenues following the Supreme Court ruling on President Trump's use of emergency powers. Meanwhile, the potential to price in more Fed easing if data disappoint or expectations of a more dovish Fed chair could lead to moderately lower front-end yields, widening the differential between 2-year and 10-year yields in the near term.

U.S. yield curve steepens with improving growth outlook

Notes: The Leading Economic Index, produced by The Conference Board, is designed to be a predictive tool that anticipates—or “leads”—turning points in the business cycle by around seven months. It is made up of 10 economic components.

Sources: Bloomberg and The Conference Board, as of December 31, 2025.

We also see opportunities to position long Treasury Inflation-Protected Securities (TIPS) versus Treasuries (that is, long breakevens), where expectations for future inflation have fallen to around 2.25% at the 10-year point. We believe these levels represent a benign pricing of future inflation risk despite persistent above-target inflation and a Fed that is positioned to remain dovish.

In agency mortgage-backed securities (MBS), we remain overweight and find the greatest value in select subsectors that have lagged in the broader sector spread tightening in recent months, specifically agency commercial MBS, hybrid adjustable-rate mortgages, select collateralized mortgage obligation structures, and non-agency residential MBS.

If U.S. yields were to move significantly outside of their recent range, it would likely be because of either a sharp rise in recession risks, which would drive the curve steeper and pull yields meaningfully lower, or an acceleration of growth, which would put upward pressure on inflation and pull yields higher across the curve, driven by the long end. Of these possibilities, we believe the odds are tilted more toward the first scenario.

Non-U.S. rates

Outside the United States, inflation continues to moderate and growth has remained steady, as the most severe risks related to tariff policies have largely been averted. Looking ahead, we anticipate increasing divergence in both fiscal and monetary policies among major economies, which may offer relative value opportunities across different regions.

Thematically, the steepening trend observed in most developed markets remains intact. Investors are increasingly concerned about fiscal sustainability in these markets, leading them to demand higher term premiums for longer-duration bonds.

We believe the global term premium will continue to rise, and we are positioned for further yield curve steepening. We are focused on three areas in particular:

- **Europe.** A change in Dutch pension fund regulation in 2026 means that the Netherlands will move from a defined benefit to a defined contribution system. That will result in lower demand for long-duration fixed income at a time of growing sovereign issuance—a mismatch of supply and demand that we believe will lead to further curve steepening.
- **Germany.** We expect a significant ramp-up in government bond supply will put upward pressure on yields, particularly at the long end of the curve. We remain positioned for bund underperformance against 30-year gilts, as we observe more favorable issuance dynamics in the U.K.
- **Japan.** We continue to hold an underweight to Japanese government bonds. However, we recognize that following the sharp rise in yields in the fourth quarter, much of our expectation for higher interest rates in Japan has now been discounted.

Long-term bond yields rising globally

Source: Bloomberg, as of December 31, 2025.

Credit outlook

Credit spreads widened slightly in the fourth quarter but ended 2025 near where they started. Among major credit segments, emerging markets (EM) performance stood out and was one of our higher-conviction allocations this past year. Hard currency EM bonds benefited from appealing valuations and strong inflows, while local currency EM returns were boosted by EM currency strength versus the dollar.

We expect credit to outperform government bonds again this year. All-in yields are attractive across sectors and underlying fundamentals remain broadly healthy. Spread levels remain low but

reflect a supportive market backdrop and strong investor demand. Generating outperformance will depend heavily on identifying credit trends among issuers and relative value opportunities among individual issues.

Supply and demand

If recession risks remain low, we see little likelihood of significant spread widening, but we do expect a headwind from a meaningful increase in new issuance over the course of the year. This uptick in overall bond supply may keep spreads from narrowing much further.

Credit spreads can remain stable for long periods of time

Notes: This chart shows the movement of credit spreads as represented by the Bloomberg U.S. Credit Index and indicates when spreads were low and stable in the five different market environments, as listed below.

Time period	Feb. 1991–July 1998	Oct. 2003–June 2007	Oct. 2012–May 2015	Aug. 2016–Feb. 2020	July 2020–Dec. 2025
Average spread level	76 bps	85 bps	120 bps	109 bps	99 bps
Spread range	73 bps	26 bps	49 bps	61 bps	77 bps

Source: Bloomberg, as of December 31, 2025.

For investment-grade corporates, industry estimates call for gross supply to increase roughly 10% from last year to \$2 trillion and for net supply to rise 23% to \$800 billion. Gross supply has remained robust in recent years. However, net supply has been negative, which has provided additional support to keep spreads low. This year's increase is largely attributed to continued robust investment in AI and a projected rise in merger and acquisition activities.

We believe investor appetite for high-quality yield will persist, and we view any widening as a chance to increase our exposure to preferred issuers at more attractive prices.

Lower-rated credit continues to benefit from favorable economic conditions, providing investors with increased confidence to pursue higher yields. We expect this trend to persist in the coming quarters, though it is important to note that spread levels for high-yield corporate and lower-rated EM bonds are near cyclical lows, which constrains the potential for further broad-based tightening.

Cracks on the edges

Last year's stresses in private credit markets, while not broad, showed that elevated valuations provide little compensation in the event of a market downturn. Default rates in private credit and leveraged loans, while still relatively low, have increased in recent years. Default rates in high-yield bonds have remained low and relatively stable.

For example, the trailing 12-month default rate for private credit rose from 1.4% at the end of 2022 to 5.9% by the third quarter of 2025, according to Fitch Ratings. Leveraged loan defaults rose from a rate of 1.8% at the end of 2022 to 3.6% at the end of 2025, per Bank of America. Meanwhile, high-yield bond default rates ended the year low and stable, at 1.2%.

These trends align with the relative credit-quality differences across the three segments of lower-rated corporate credit, and provide an indication for the behavior of each as market conditions evolve.

High-yield bond and leveraged loan default rates

Taxable strategy map

Rates

Exposure	View	Strategy
U.S. duration and curve	- The market's pricing of expected cuts may materialize unless we see upside surprises to growth. - Longer-maturity yields are unlikely to move lower outside of recessionary scenarios.	- We remain strategically neutral on U.S. duration. - We are positioned for a steeper curve - We see value in 10-year inflation breakevens.
Global duration and curve	- Rising term premium pressures could hold long-end yields higher. - Increased supply is expected to drive bund underperformance. - Dutch pension fund reform is likely to force a steeper euro curve.	- We are positioned for a steeper curve in Europe and Canada. - We remain constructive on long-end U.K. gilts outperforming German bunds.
Mortgage-backed securities (MBS)/ agencies	- Fundamental and technical drivers are all positive for MBS. - Generic MBS valuations are rich, but subsectors offer value.	We are overweight agency CMBS, hybrid ARMs, and select CMO structures, and underweight generic agency pass-through exposure.

Credit

Exposure	View	Strategy
Investment-grade corporates	- Higher net supply is expected from AI capex and higher M&A activity. - Fundamentals remain supportive; valuations remain stretched.	- We are overweight banks versus industrials driven by lower supply, strong fundamentals, and reduced regulation. - Q1 supply may push spreads wider, allowing opportunities to add attractive names at better valuations.
High-yield corporates	- Spread levels offer limited compensation for downside risks. - Issuance related to AI and M&A is expected to increase in 2026. - Security selection offers the best opportunities to outperform in this market.	- We remain cautious overall on generic high-yield beta exposure. - Our highest-conviction views remain at the issuer level.
Emerging markets	- The sector is benefiting from strong supply-demand technicals. - Lower-quality issuers have shown improvements. - Fundamentals remain stable, but valuations warrant more selective exposure as Q1 supply picks up.	- At current spread levels, our focus remains on country and security selection. - We are cautious on lower-quality issuers trading at narrow spread levels relative to their underlying fundamentals.
Structured products	2026 is expected to be a record supply year. - Spread levels are tight, but the sector offers attractive carry.	- We are overweight subordinated ABS tranches with strong structural protection. - CLO AAAs and AAs continue to provide good carry and spread pickup relative to ABS and 1–5 year corporates.

Cutting through the AI noise

AI's impact is expected to be transformative, and we are likely in the early innings of a global AI arms race. Investor focus continues to be on AI's potential and expected effects—on productivity, corporate profit margins, and revenue streams—as well as how the AI ecosystem will be financed.

McKinsey estimates that by 2030 the global AI infrastructure buildout will cost between \$5 trillion and \$8 trillion. These are staggering estimates, with the ultimate cost depending on the pace of AI adoption and technology uplift.

Hyperscalers have commented that compute capacity continues to lag demand, and that power is the largest limiting factor governing compute growth. Power is likely to be the main bottleneck, driven by the need for reliable, 24/7 power sources as new capacity additions beyond 2026 are likely to be constrained.

Funding the capex surge

The buildout of AI infrastructure accelerated last year and has shown no signs of slowing. Hyperscaler-driven capital expenditures are expected to continue to grow at a torrid pace in 2026, with Bloomberg sell-side consensus estimates calling for nearly 30% year-over-year growth after an estimated 60% year-over-year increase in 2025.

Hyperscaler balance sheets and free cash flow are healthy. While some capex has been funded with cash flow, hyperscalers have accessed various fixed income markets for financing, including the investment-grade primary market. In 2025, investment-grade corporate bond issuance by hyperscalers surpassed \$130 billion, compared with roughly \$20 billion in 2024.

Looking ahead to this year, hyperscaler bond issuance may be even higher, though it depends on free cash flow generation and competing capital allocation needs.

Hyperscaler free cash flow

(Sell-side consensus estimates)

Note: Data are calendar-year-adjusted to align reporting periods for Microsoft and Oracle.

Source: Bloomberg, as of December 31, 2025.

Adding value through our selective investment process

We see both risks and opportunities with a fair amount of dispersion across the AI opportunity set, requiring careful due diligence to identify winners and losers across the corporate universe. Technicals associated with the sizable bond issuance required to fund AI infrastructure, coupled with general investment-grade funding needs, may cause investment-grade bond spreads to widen temporarily.

This may present opportunities for our active fixed income group to express selective constructive views on hyperscalers, AI adopters, and adjacent players after carefully considering the attractiveness of the risk/reward.

Looking ahead, investors need to monitor and understand the following areas:

- The evolution of AI hardware, specifically semiconductor chips.
- Model capabilities and the rate of change of improvement—breakthroughs toward superintelligence.
- AI adoption and the impact on productivity and corporate margins, how is this being measured—i.e., AI savings in dollar terms.
- Power supply trends.

For more information about active fixed income, speak with your financial advisor.

Connect with Vanguard® • advisors.vanguard.com • 800-997-2798

For more information about Vanguard funds or Vanguard ETFs, visit advisors.vanguard.com or call 800-997-2798 to obtain a prospectus or, if available, a summary prospectus. Investment objectives, risks, charges, expenses, and other important information about a fund are contained in the prospectus; read and consider it carefully before investing.

Vanguard ETF Shares are not redeemable with the issuing Fund other than in very large aggregations worth millions of dollars. Instead, investors must buy and sell Vanguard ETF Shares in the secondary market and hold those shares in a brokerage account. In doing so, the investor may incur brokerage commissions and may pay more than net asset value when buying and receive less than net asset value when selling.

Past performance is no guarantee of future results. All investing is subject to risk, including possible loss of principal. Diversification does not ensure a profit or protect against a loss.

Bonds of companies based in emerging markets are subject to national and regional political and economic risks and to the risk of currency fluctuations. These risks are especially high in emerging markets.

High-yield bonds generally have medium- and lower-range credit-quality ratings and are therefore subject to a higher level of credit risk than bonds with higher credit-quality ratings.

U.S. government backing of Treasury or agency securities applies only to the underlying securities and does not prevent share price fluctuations. Unlike stocks and bonds, U.S. Treasury bills are guaranteed as to the timely payment of principal and interest.

Bond funds are subject to interest rate risk, which is the chance bond prices overall will decline because of rising interest rates, and credit risk, which is the chance a bond issuer will fail to pay interest and principal in a timely manner or that negative perceptions of the issuer's ability to make such payments will cause the price of that bond to decline.

Investments in bonds issued by non-U.S. companies are subject to risks including country/regional risk and currency risk.

Municipal bond fund distributions, including any market discount recognized by the Fund's investments, may be taxable as ordinary income or capital gains. A majority of the income dividends that you receive from the Fund are expected to be exempt from federal income taxes. However, a portion of the Fund's distributions may be subject to federal, state, or local income taxes or the federal alternative minimum tax. You should consult your own tax advisor with respect to any particular U.S. or non-U.S. tax consequences of your investment in the Fund.

Be aware that fluctuations in the financial markets and other factors may cause declines in the value of your account. There is no guarantee that any particular asset allocation or mix of funds will meet your investment objectives or provide you with a given level of income.

Important Information

VIGM, S.A. de C.V. Asesor en Inversiones Independiente ("Vanguard Mexico") registration number: 30119-001-(14831)-19/09/2018. The registration of Vanguard Mexico before the Comisión Nacional Bancaria y de Valores ("CNBV") as an Asesor en Inversiones Independiente is not a certification of Vanguard Mexico's compliance with regulation applicable to Advisory Investment Services (Servicios de Inversión Asesorados) nor a certification on the accuracy of the information provided herein. The supervision scope of the CNBV is limited to Advisory Investment Services only and not all services provided by Vanguard Mexico.

This material is solely for informational purposes and does not constitute an offer or solicitation to sell or a solicitation of an offer to buy any security, nor shall any such securities be offered or sold to any person, in any jurisdiction in which an offer, solicitation, purchase or sale would be unlawful under the securities law of that jurisdiction. Reliance upon information in this material is at the sole discretion of the recipient.

Securities information provided in this document must be reviewed together with the offering information of each of the securities which may be found on Vanguard's website: <https://www.vanguardmexico.com/institutional/products/en/list/overview> or www.vanguard.com

Vanguard Mexico may recommend products of The Vanguard Group Inc. and its affiliates and such affiliates and their clients may maintain positions in the securities recommended by Vanguard Mexico.

ETFs can be bought and sold only through a broker and cannot be redeemed with the issuing fund other than in very large aggregations. Investing in ETFs entails stockbroker commission and a bid-offer spread which should be considered fully before investing. The market price of ETF Shares may be more or less than net asset value.

All investments are subject to risk, including the possible loss of the money you invest. Investments in bond funds are subject to interest rate, credit, and inflation risk. Governmental backing of securities applies only to the underlying securities and does not prevent share-price fluctuations. High-yield bonds generally have medium- and lower-range credit quality ratings and are therefore subject to a higher level of credit risk than bonds with higher credit quality ratings.

There is no guarantee that any forecasts made will come to pass. Past performance is no guarantee of future results.

Prices of mid- and small-cap stocks often fluctuate more than those of large-company stocks. Funds that concentrate on a relatively narrow market sector face the risk of higher share-price volatility. Stocks of companies are subject to national and regional political and economic risks and to the risk of currency fluctuations, these risks are especially high in emerging markets. Changes in exchange rates may have an adverse effect on the value, price or income of a fund.

The securities offered and sold in Peru may not be sold or transferred to any person other than an institutional investor unless such securities have been registered with the Registro Público del Mercado de Valores kept by the SMV. The SMV has not reviewed the information provided to the investor. This material is for the exclusive use of institutional investors in Peru and is not for public distribution.

The financial products described herein may be offered or sold in Bermuda only in compliance with the provisions of the Investment Business Act 2003 of Bermuda. Additionally, non-Bermudian persons may not carry on or engage in any trade or business in Bermuda unless such persons are authorized to do so under applicable Bermuda legislation. Engaging in the activity of offering or marketing the financial products described herein in Bermuda to persons in Bermuda may be deemed to be carrying on business in Bermuda.

Vanguard Mexico does not intend, and is not licensed or registered, to conduct business in, from or within the Cayman Islands, and the interests in the financial products described herein shall not be offered to members of the public in the Cayman Islands.

The financial products described herein have not been and will not be registered with the Securities Commission of The Bahamas. The financial products described herein are offered to persons who are non-resident or otherwise deemed non-resident for Bahamian Exchange Control purposes. The financial products described herein are not intended for persons (natural persons or legal entities) for which an offer or purchase would contravene the laws of their state (on account of nationality or domicile/registered office of the person concerned or for other reasons). Further, the offer constitutes an exempt distribution for the purposes of the Securities Industry Act, 2011 and the Securities Industry Regulations, 2012 of the Commonwealth of The Bahamas.

This document is not, and is not intended as, a public offer or advertisement of, or solicitation in respect of, securities, investments, or other investment business in the British Virgin Islands ("BVI"), and is not an offer to sell, or a solicitation or invitation to make offers to purchase or subscribe for, any securities, other investments, or services constituting investment business in BVI. Neither the securities mentioned in this document nor any prospectus or other document relating to them have been or are intended to be registered or filed with the Financial Services Commission of BVI or any department thereof.

This document is not intended to be distributed to individuals that are members of the public in the BVI or otherwise to individuals in the BVI. The funds are only available to, and any invitation or offer to subscribe, purchase, or otherwise acquire such funds will be made only to, persons outside the BVI, with the exception of persons resident in the BVI solely by virtue of being a company incorporated in the BVI or persons who are not considered to be "members of the public" under the Securities and Investment Business Act, 2010 ("SIBA").

Any person who receives this document in the BVI (other than a person who is not considered a member of the public in the BVI for purposes of SIBA, or a person resident in the BVI solely by virtue of being a company incorporated in the BVI and this document is received at its registered office in the BVI) should not act or rely on this document or any of its contents.

This document is not intended to provide tax advice or make an exhaustive analysis of the tax regime of the securities described herein. We strongly recommend seeking professional tax advice from a tax specialist.
